

SCIENTIFIC AMERICAN

CONTENIDO

VOLUME 305 No. 6 DECEMBER 2011

FEATURES

Piscine profile: A live baby trout, in the second of the fish's four life stages, poses under a stereomicroscope for Canadian Robert Berdan, one of the photographers in the 2011 Olympus BioScapes competition

TECHNOLOGY SPECIAL REPORT

40 World Changing Ideas

Brain chips, palm readers, nanobiotics and other inventions that will make a difference.

52 The Machine That Would Predict the Future.

Inside the billion-euro project to make a crystal ball from all the world's data.

David Wienberger.

SPACE EXPLORATION

58

This Way to Mars.

Sending people to asteroids and beyond would be affordable if engineers adapted ideas of their colleagues who make robotic planetary probes.

Damon Landau and Nathan J. Stange.

BIOLOGY

66

Dazzling Miniatures.

This year's Olympus BioScapes International Digital Imaging Competition gives pride of place to stinkbugs, slime molds and other Lilliputian creatures.

Gary Stix.

CLIMATE CHANGE

72

After the Deluge.

A spate of recent floods, droughts and heat waves is prompting cities and states to take bold steps to protect their people and property.

John A. Carey.

NEUROSCIENCE

76

Hidden Switches in the Mind.

Experience may contribute to mental illness by causing "epigenetic" changes — ones that turn genes on or off without altering the genes themselves.

Eric J. Nestler.

ANIMAL BEHAVIOR

84

Ants and the Art of War.

Battles among ant colonies can be startlingly similar to human military operations.

Mark W. Mofett.

FORENSICS

90

Arm in the Ice.

New identification techniques solve a mystery from a 60-year-old plane crash.

Collen Fitzpatrick.

EDUCATION

94

Speaking Out on the “Quiet Crisis”.

Strengthening science education in the key to securing our energy future, says Rensselaer Polytechnic Institute’s president.

Interview by Brendan Borrell.

DEPARTMENTS

6

From the Editor

8

Letters

14

Science Agenda.

Stop the genetic dragnet.

The Editors.

16

Forum.

Who will save humanity from killer asteroids?

Edward T. Lu.

18

Advances.

Feel without touch. Microwave physics. Call circuits. Food and genes, Coffee fluidics. The arc of Steve Jobs. Brainy gifts, Speedy neutrinos. Pollen to polyester.

34

The Science of Health.

An effective treatment for intestinal ailments may fall victim to regulatory difficulties.

Maryn McKenna.

38

TechnoFiles.

The phone turns into a looking glass.

David Pogue.

100

Recommended.

Nature’s time machine. Magical mathematics. Neurogastronomy. Our unique Earth.

Kate Wong.

102

Skeptic.

Research on self-control explains the link between religion and health.

Michael Shermer.

104

Anti Gravity.

How to prove the existence of pudding.

Steve Mirsky.

106

50, 100 & 150 Years Ago.

110

Graphics Science.

Science aficionados have odd and surprising interests.

Mark Fischetti.

On the Cover

Our third annual. “World Changing Ideas” special issue showcases 10 technologies and trends that will shape the future, In addition to stories on neural microchips, crypto currieries and nanotech antibiotics, we take a close look, at an ambitious project to exploit the growing torrent of available data streams to model politics, culture, finance and the environment.

Photography by *Dan Saelinger.*
