

AUSTRALASIAN SCIENCE

CONTENIDO

VOLUMEN 32 No. 10, DECEMBER, 2011

FEATURES

- 16 **Decoding the Genome of the Tammar Wallaby.**
The sequencing of the tammar wallaby genome has provided fascinating insights into its unique reproductive and immune systems.
Tonny Papenfuss .
- 20 **Artificial Photosynthesis:
Feeding and Fuelling the Future.**
A global scientific project using nanotechnology and synthetic biology to re-engineer photosynthesis may help solve our energy, food, water and greenhouse gas problems.
Thomas Faunce.
- 23 **Gestational Diabetes: The Effects Don't Stop at Birth.**
New research explains why the children of mothers who develop diabetes during pregnancy have increased risks of obesity and diabetes themselves.
Sue Mei Lau & Jenny Gunton.
- 26 **Is Cancer the Next of Kin to the Developing Foetus?**
A gene that is important for the development of the foetus may hold new clues to how cancer cell division gets out of control, and guide the identification of new targets for cancer therapy.
Mike Eccles.
- 28 **Rapid Evolution? The Eyes Have It.**
The discovery of exquisite fossils on Kangaroo Island real that complex eyes rapidly during evolution's Big Bang, the Cambrian explosion, half a billion years ago..
Michael Lee & John Paterson.
- 31 **How Toxic Is Traditional Bush Tucker in the Alps?**
Bogong moths are not only traditional bush tucker for indigenous people, but they are also important food for many alpine species. But does the discovery that they contain elevated levels of arsenic pose any real dangers to indigenous people or the high country ecosystem?
Susan Lawler & Pettina Lave.

34 **Fish in Hot Water.**
Warming water in the Tasma Sea may have exceeded the tolerance limits for fish growth.
Anna Neuheimer.

36 **A Nobel Week.**
Brian Schmidt's world was turned upside down when he was awarded the 2011 Nobel Prize for Physics for research that has turned our understanding of the universe inside out.
Stephen Luntz.

conSCIENCE

4 **Carbon and Forests: The Big Picture.**
Energy generated by burning forestry waste and other biomass sources should be recognized as renewable.
Jarry Vanclay.

REGULAR COLUMNS

3 **Simon Says**
The work of Australian's new Nobel Laureate challenges the semantics of the absolute.

5 **Browse**
A round-up of the latest science news from our shores.

38 **Expert Opinion.**
What are the implications of the European Court of Justice's ruling that research involving the removal of a stem cell from a human embryo at the blastocyst stage cannot be patented?

39 **Cool Careers.**
Simon Chapman has fought the tobacco industry, gun lobby and even opponents of wind farms and swimming pool fences.

40 **Publish or Perish.**
Your guide to new science books publishes this month.

41 **Directions.**
Australia can take six steps to secure its future as a balanced economy, says the Australia CEO of a global company.

42 **Australian Sky.**
Your map of the night sky this month.

- 43 **Out of this World.**
Dave Reneke brings news from the space and astronomy communities around the world.
- 44 **The Naked Skeptic.**
Scientists and skeptics look for evidence and change their minds when evidence requires it. For some people, however, no evidence is enough, no matter how clear.
- 45 **Eureka!**
Magdeline Lum reports on quirky experiments and research findings.
- 46 **Eco Logic.**
Managing threatened species requires management of multiple threats. Conservation of koalas is a point in case.
- 47 **Low Tech.**
Should we trust government bureaucrats more than elected politicians or scientists to make decisions about new technologies?
- 48 **Quandary.**
A milestone case in the European Court of Justice sheds light on opposition to human embryo research.
