

PHYSICS EDUCATION

CONTENIDO

VOLUME 45 No. 5, SEPTEMBER 2010

437 **NEWS**

FRONTLINE

453 A classroom demonstration of wireless energy transfer.
Matthew Luczak and Blane Baker.

454 Can we feel physics concepts?
Yucheng Su.

456 Dust affects solar-cell efficiency.
A Molki.

458 Easy demonstration of the Poisson spot.
Paul Gluck.

459 Playground fun demonstrates rotational mechanics concepts.
Michael Thompson, Philip Barron, Charles Chandler, Katie Shaw and Kieran Hannafin.

FEATURES

462 Simple verification of the parabolic shape of a rotating liquid and a boat in its surface.
Z Šabatka and L Dvořák.

469 Can the full Moon and the Sun be observed on the same side of the sky?
Katarina Susman and Mojca Čepič.

475 The Darío Bacas goniobarimeter: building a balance based on properties of the cycloid.
Javier del Rey Pantín and José M Ortiz de Zárate.

481 A simple demonstration for exploring the radio waves generated by a mobile phone.
Jonathan Hare.

487 Fire-walking.
David Willey.

494 Thrust and propulsive efficiency from an instructive viewpoint.

Richard D Kaufman.

- 500 A new method for computing the centre of mass of a bicycle and rider.
Hezi Yizhaq and Gil Baran.
- 505 Project laboratory in a high school.
Paul Gluck.
- 511 ‘School adopts an experiment’: the magnetic levitation of superconductors.
Aurelio Agliolo Gallitto.
- 516 Thermoacoustic school project work with an electrically.
Tamás Beke.
- 529 The magnetic field inside a long solenoid—a new approach.
David Andrew, Kevin Carlton and David Lisgarten.
- 533 Transforming a traditional hands-on activity into an enquiry activity to foster more in-depth understanding of the concept of density.
Yeung Chung Lee and Ping Wai Kwok.
- 539 Achievement evaluation within a non-conventional framework: some experiences in physics and humour.
C H Wörner, A Romero and G Bustamante.
- 544 **Contents: People and Reviews**
- 563 **End Results**

COVER PICTURE:

This year’s IOP schools and colleges lecturer, Melanie Windridge, explains how the fusion reaction that powers the Sun could provide a clean source of energy in times to come. The Lecture aims to inspire students to get into physics and face the challenge of powering the future. p 560.
