

SCIENCE NEWS

CONTENIDO

VOLUME 178 No. 9, OCTOBER 2010

IN THE NEWS

- 5 Story One.**
▪ A livable exoplanet, temperature-wise.
- 8 Technology.**
▪ 3-D X-rays light up bone's inner structure.

▪ The ideal traffic light.
- 9 Environment.**
▪ Lone Star genes come to the rescue of Florida panthers.

▪ Alaskan glacier cracks upward.
- 10 Matter & Energy.**
▪ Finding relativity in the everyday.

▪ Laser compass points home.
- 11 Molecules.**
▪ An icy start for early life.

▪ Cued by chemistry, tiny tool performs a minibiopsy.
- 12 Humans.**
▪ Neandertals may have met a volcanic end.

▪ New evidence for Inca Child sacrifices.
- 14 Life**
▪ Census ends, but number of species in the sea still TBD.
- 15 Genes & Cells.**
▪ A dash of salt in the right cells can regrow tadpole tails.

▪ Many genes influence height.
- 16 Science & Society.**
Nobel Prizes in medicine, physics and chemistry.

PHOTO ESSAY

- 22 **An Oceanic Endeavor.**
COVER STORY: A decade-long effort documents the weird, wild and wonderful creatures of the seas.
Susan Milius.

FEATURES

- 18 **The Unusual Suspects.**
Scientists attempt to unravel the complex genetic secrets underlying autism.
Susan Gaidos.

- 28 **Cosmic Dioramas.**
Materials that bend light in unusual ways may help physicists study the Big Bang and — if they exist !!6 other universes.
Elizabeth Quill.

DEPARTAMENTS

- 2 **From the Editor**

- 4 **Notebook**

- 30 **Bookshelf**

- 30 **Feedback**

- 32 **Comment**
Biochemist Michael Holick discusses vitamin D's vital contribution to human health.

COVER

The jellyfish *Crossota norvegica* was collected 1,600 meters below the Arctic ice during one of 540-plus research expeditions undertaken for the Census of Marine Life.
Kevin Raskoff.
