

SCIENCE NEWS

CONTENIDO

VOLUME 179 No. 1, JANUARY 2011

IN THE NEWS

- 5 **Story One.**
▪ Mono Lake microbe trained to munch arsenic.
- 8 **Earth.**
▪ Predicting avalanches with glacial icequakes.

▪ Fluid channels focus to carve.
- 9 **Matter & Energy.**
▪ Mercury isotope splits oddly.

▪ Light generates lift.
- 10 **Atom & Cosmos.**
▪ Universe full(er) of stars.

▪ Long-gone moon may have left ice for Saturn's rings.

▪ Crab nebula goes gamma.

▪ Slow twirl for Milky Way's central black hole.

▪ Stellar winds smash photons.
- 12 **Molecules**
▪ Rough explanation for diamond polishing.

▪ Snotty smells.
- 14 **Body & Brain.**
▪ Mixed message on Vitamin D recommendations.

▪ H1N1 midlife immunity crisis blamed on mismatched antibodies.
- 15 **Life.**
▪ Fungi can't take the heat.
- 16 **Humans.**
▪ Thirtysomethings remember faces better than younger folks do.

- Higher levels of well-being for those with friends at church.

SPECIAL SECTION

18

Science news of the year.

COVER STORY: *Science News* editors and writers survey the top news from the world of science in 2010.

18 Environment.

20 Life.

21 Matter & Energy.

22 Atom & Cosmos.

23 Numbers.

24 Body & Brain.

26 Technology.

27 Humans.

28 Genes & Cells.

29 Molecules.

30 Earth.

31 Nutrition.

32 Science & Society.

Comment

Elizabeth Marincola, Society for Science & the Public's president, reflects on the organization's expanding efforts to promote science.

COVER

Gliese 581g, shown in this illustration, is the first exoplanet discovered with a surface temperature that can sustain liquid water —if, in fact, the planet exists.

Nicolle Rager Fuller
