

SCIENCE NEWS

CONTENIDO

VOLUME 179 No. 2, JANUARY 2011

IN THE NEWS

- 5 **Story One.**
▪ Hope for protecting polar bear habitat.
- 8 **Molecules.**
▪ Untangling how hair behaves, strand by strand.

▪ Sun – loving hornets.
- 9 **Genes & Cells.**
▪ Mice provide clues to burning more brown fat.

▪ New bones in cellular skeletons.

▪ Programming cells to makes insulin.
- 10 **Humans.**
▪ Neandertals’ kissing cousins.
- 12 **Earth.**
▪ Volcanic gas fueled greatest mass extinction.

▪ X-raying lightning.

▪ Sea ice memories.
- 13 **Atom & Cosmos.**
▪ Rethinking cosmic reincarnation.
- 14 **Body & Brain.**
▪ Be very afraid — unless you have no amygdala.

▪ A blood test for heart disease.

▪ Alzheimer’s may slow clearance of plaque-building protein.

▪ Salvia says high.
- 16 **Life.**
▪ For female chimps, sticks double as dolls.

- African elephants have their differences.

FEATURES

- 18 **Young‘uns adrift in the sea.**
COVER STORY: An improved understanding of marine larvae is crucial to understanding how the sea’s life replenishes itself.
Susan Milius.
- 22 **Physicist Join Immune Fight.**
Mathematical tools from physics may help biologists quantify and control the complex workings of the body’s defenses.
Susan Gaidos.
- 26 **Liquid Acquisition.**
Scientists debate new scenarios for explaining how the Earth acquired the water for its oceans.
Ron Cowen.

DEPARTMENTS

- 2 **From the Editor**
- 4 **Notebook**
- 30 **Bookshelf**
- 31 **Feedback**
- 32 **Comment**
Presidential science adviser John Holdren discusses the challenges of the next two years.

COVER

Larvae such as this butterfly fish (top) are leading marine biologists to a deeper understanding of how the next generation of the sea’s inhabitants gets established.
G David Johnson
