

SCIENCE NEWS

CONTENIDO

VOLUME 179 No. 7, MARCH 2011

IN THE NEWS

- 5 Story One.**
- No turnabout for weak sun.
- 8 Atom & Cosmos.**
- Rethinking cosmic ray's source.
 - Star-to- star wormholes.
- 9 Humans.**
- One man doesn't got the beat.
 - Club drug can cause users to bid bodies farewell.
- 10 Matter & Energy.**
- Fluffy form of diamond.
 - Lasers draw miniature 3-D structures.
 - Sending atomic signals.
 - Tiny rods twist light.
- 11 Genes & Cells.**
- Gene stifles stroke recovery.
- 12 Body & Brain.**
- Protein profile tells Lyme disease from chronic fatigue.
 - HPV hangs around in men.
 - Slo-mo is brain's norm.
 - Cell phone talks get more than conversation.
- 14 Life.**
- Physics of burrowers.
 - Arthropods go from squishy to spiked.
 - U.S. South is fire ant base.

- Sluggish split for worms.
- Lack of water may stop toads.
- Dino heart made of sand.

16

Science & Society.

- Testing Mafia's acid claims.
- Sleuthing how rats get in food.

FEATURES

18

Dining in.

COVER STORY: Finding out how cells eat themselves may help researchers develop new treatments for a range of diseases.

Tina Hesman Saey.

22

Ice in Motion.

Glacial pace isn't always slow. Scientists are finding that the speed at which ice collapses from some of the world's glaciers is increasing — a change that has implications for sea level rise.

Alexandra Witze.

26

Better by Design.

Chemists call for a new approach to building novel molecules: Keep the body and environment in mind.

Rachel Ehrenberg.

Comment

Subra Suresh, director of the National Science Foundation, on how basic research can spur societal progress.

COVER

Cells sometimes eat themselves — a process that disposes of bacterial invaders and recycles damaged cellular parts.

Nicolle Rager Fuller.
