## **CONTENIDO**

**VOLUME 179 No. 12, JUNE 2011**

### **IN THE NEWS**

- 5 Story One.**  
▪ In networks, an unassuming few can control the many.
- 8 Humans.**  
▪ No nuts for “Nutcracker Man”.  
  
▪ Stone Age Russians left confusing calling card.
- 9 Life.**  
▪ Giant winged ant left its mark in Wyoming.  
  
▪ Saltwater worms may have gone fresh early.
- 10 Atom & Cosmos.**  
▪ Dark matter detected, maybe.  
  
▪ Crab Nebula’s gamma-ray belches befuddle astronomers.
- 12 Genes & Cells.**  
▪ Fertilization sprays zinc sparks.  
  
▪ Sickle-cell disease’s antimalarial secret.  
  
▪ Reprogrammed stem cells face fight from immune system.
- 14 Science & Society.**  
▪ High school whiz kids win big in Los Angeles.
- 15 Environment.**  
▪ Ozone hole over Antarctica seems to be healing.  
  
▪ Climate changes skew global grain harvests.
- 16 Body & Brain.**  
▪ High autism rates a surprise in South Korea.  
  
▪ Heart bypass surgeries diminishing.

### **FEATURES**

- 18      **Stellar Oddballs.**  
COVER STORY: Beyond the bounty of exoplanets spotted by the Kepler telescope, astronomers have identified pulsating, spinning and otherwise unruly stars in its field of view.  
*Charles Petit.*
- 22      **Healthy Aging in a Pill.**  
Near-starvation diets may foster long and healthy lives, and scientists hope to do the same with medications — but without the calorie cut.  
*Laura Beil.*
- 26      **Simple Heresy.**  
Investment shortcuts often reap greater rewards than formulas found in standard economics textbooks.  
*Bruce Bower.*

## DEPARTMENTS

- 2      **From the Editor**
- 4      **Notebook**
- 30      **Bookshelf**
- 31      **Feedback**
- 32      **From the Archive**  
In the late 1950s, roughly half the astronomers who voted on whether the universe began with a Big Bang said “No”.

## COVER

The space-based Kepler telescope detects strange stars, including flaring dwarfs similar to the one illustrated here, that seem wacky compared to Earth’s quiet sun.  
*Casey Reed, NASA.*
