CONTENIDO

VOLUME 180 No. 5, AUGUST 2011

IN THE NEWS

- 5** **Story One.**
▪ Scientists retrace cougar's journey using DNA.
- 8** **Body & Brain.**
▪ After losing their heads, rats have spurt in brain activity.

▪ Chimp brains don't shrink with age the way humans' do.

▪ Interrupted sleep impairs memory-making.

▪ Kidney transplants' new spin.
- 10** **Humans.**
▪ Kids share spoils; new chimps tend to hoard.

▪ Prehistoric root munching.

▪ Rock-paper-scissors players play copycat.
- 11** **Genes & Cells.**
▪ DNA triggers for some blood cancers pinpointed.
- 12** **Life.**
▪ Electric signals send tingles through dolphins' noses.

▪ Wasps recognize mug shots.

▪ Rattlesnakes care for babies.

▪ Flowers' runway lights inspire misguided bee loyalty.

▪ Oval-spotted wasps better at attracting the ladies.
- 14** **Atom & Cosmos.**
▪ New particle seen at Fermilab.

▪ Hints of new physics challenged.

▪ Mars probe target selected.

- 16 **Matter & Energy.**
▪ Cloak works in visible light.

▪ Radio waves do the twist.

FEATURES

- 18 **Sparing the Rare Earths.**
COVER STORY: Potential short-ages spur researchers to develop alternative magnet technologies that don't rely so heavily on these special metals.
Devin Powell.
- 22 **The Color of Controversy.**
Food dyes re-enter the lime-light — this time as the U.S. government questions whether they cause hyperactivity in children.
Laura Beil.
- 26 **When Birds go to Town.**
Scientists investigate how metropolitan critters react to urban opportunities.
Susan Milius.

DEPARTMENTS

- 2 **From the Editor**
- 4 **Notebook**
- 30 **Bookshelf**
- 31 **Feedback**
- 32 **From the Archive**
A close examination of the math of quantum mechanics led to the pre-discovery of antimatter particles in 1930.

COVER

Worries about the supply of rare earth elements such as those streaking this piece of bastnäsite have scientists searching for alternative materials.
Molycorp Minerals.
