CONTENIDO

VOLUME 180 No. 13, DECEMBER 2011

IN THE NEWS

- 5 **Story One.**
▪ Signs of Great European Lakes beneath chaotic surface.
- 8 **Molecules.**
▪ Durables plastics, remoldable and recyclable.

▪ Nanoroadster goes for a spin.
- 9 **Matter & Energy.**
▪ Hydrogen squeezed into metal, maybe.
- 10 **Body & Brain.**
▪ Picturing a dream.

▪ Stare, if you dare, into hypnotic eyes.

▪ Early sexual abuse linked to heart disease later on.
- 12 **Life.**
▪ Migrating helped make some dinos so sizable.

▪ Ancient South American mammal had sharp teeth.
- 13 **Environment.**
▪ Pollution strengthens Asian cyclones.
- 14 **Science & Society.**
▪ Exploring brain science's wartime applications.
- 16 **Genes & Cells.**
▪ Genetic variant influences brain's aging.

▪ Spotted horses weren't figments of cave painters' imaginations.
- 17 **Atom & Cosmos**
▪ Explaining the moon's magnetism.

FEATURES

- 18 **Out of the Box.**

COVER STORY: By tricking the brain, new 3-D displays attempt to overcome existing obstacles to replicate a real-world experience.

Devin Powell.

22

Missing Lincs.

Much of the genetic material long dismissed as “junk” actually produces molecules known as lincRNAs, some of the cell’s some of the cell’s most important multitaskers.

Tina Hesman Saey.

26

Jars of Plenty.

Using DNA analysis, researchers are challenging accepted views about the rise of sophisticated economies.

Susan Gaidos.
