

SCIENTIFIC AMERICAN

CONTENIDO

VOLUME 304 No. 6 JUNE 2011

FEATURES

PHYSICS

- 38 **Living in a Quantum World.**
Quantum mechanics is not just about teeny particles. It Applies to things of all sizes: birds, plants, maybe even people.
Vlatko Vedral.

NEUROSCIENCE

- 44 **A Test for Consciousness.**
How will we know when the first sentient computer arrives? By giving it a puzzle to solve.
Christof Koch and Giulio Tononi.

NUCLEAR ENERGY

- 48 **Planning for the Black Swan.**
The accident in Fukushima has focused attention on a new generation of U.S. nuclear reactors. Are they safe enough against unforeseeable events?
Adam Piore.

BIOLOGY

- 54 **A Nobel Celebration.**
As laureates gather this month in Lindau, Germany, to share their wisdom with younger colleagues, *Scientific American* recalls some of the articles that former prizewinners have published in our pages.

TECHNOLOGY

- 64 **Inside the Meat Lab.**
A handful of scientists aim to satisfy the world's growing appetite for steak without wrecking the planet. The first step: grab a petri dish.
Jeffrey Barcholet.

MICROBIOLOGY

- 70 **The Smartest Bacteria on Earth.**
One species of soil microbe makes unusually wise communal decisions.
Anna Kuchment.

HEALTH

- 72 **The Devil's Cancer.**
A contagious tumor threatens to wipe out the famous Tasmanian devil. Could similarly "catching" cancers arise in humans, too?
Menna E. Jones and Hamish McCallum.

HISTORY OF SCIENCE

78

Greater Glory.

In the race to the South Pole, explorer Robert F. Scott refused to sacrifice his ambitious science agenda.

Edward J. Larson.

GLOBAL WARMING

84

“I Stick to the Science”.

House skeptics were counting on physicist Richard A. Muller to help them in the climate debate. It didn't work out that way.

Interview by Michael D. Lemonick.

DEPARTAMENTS

6

From the Editor

10

Letters

14

Science Agenda.

The nuclear option.

The Editors.

16

Forum.

Why science is broken — and how to fix it.

John P. A. Ioannidis.

18

Advances.

Car hackers. Plastic-eating microbes. Vengeful pitchers. Tourette's treatments. Fragile bones. The great IP address switchover. Seedless fruit genetics. Dirty pop songs.

34

The Science of Health.

How should doctors treat the different kinds of mourning?

Virginia Hughes.

36

TechnoFiles.

The wisdom of crowds can be brilliant. It can also be corrupt.

David Pogue.

88

Recommended.

A life with whales. The world's organ traffickers.

Kate Wong.

89

Skeptic.

The myth of the evil aliens

Michael Shermer.

90

Anti Gravity.

Sequential ripening and other inventions you could really use.
Steve Mirsky.

91 **50, 100 & 150 Years Ago.**

92 **Graphics Science.**
Wildfires heat up.
Mark Fischetti.

On the Cover

Physicists usually describe the weirdness of quantum mechanics in terms of particles: particles that pass through two slits at once, for example, or those that influence one another directly without sending signals through the intervening space. Yet the very same phenomena affect larger bodies, too, and may be observable in crystals and every in life.
