

SCIENTIFIC AMERICAN

CONTENIDO

VOLUME 305 No. 5 NOVEMBER 2011

FEATURES

ARCHAEOLOGY

- 36 **The First Americans.**
Who were they, and how did they get here? In light of new evidence, scientists are rethinking long-held ideas.
Heather Pringle.

PLANETARY SCIENCE

- 46 **Digging Mars.**
The leader of the Mars Phoenix mission reviews its findings and looks ahead to the Mars Science Laboratory, now setting out to follow up.
Peter H. Smith.

54 **The Smallest Astronauts.**

Could meteorites have seeded Earth with life? A Space probe filled with microbes will tell us.
David Warmflash.

- 56 **Thought Experiments.**
Philosophers are conducting scientific experiments on the nature of free will.
Joshua Knobe.

- 60 **Can We Feed the World *and* sustain the Planet?**
A five-step global plan offers a way forward.
Jonathan A. Foley.

GEOLOGY

- 66 **Sleeping Giant.**
A restive volcano is inspiring a rare collaboration between Chinese and Korean scientists.
Sid Perkins.

BIOTECHNOLOGY

- 68 **The Wipeout Gene.**
Deep in the Mexican jungle, genetically modified mosquitoes could exterminate native species that spread disease.
Bijal P. Trivedi.

COMPUTING

- 76 **A Formula for Economic Calamity.**

Despite the lessons of the 2008 collapse, Wall Street is betting our future on flimsy science.

David H. Freedman.

ENERGY

80 **The Truth about Fracking.**

What we know, and don't know, about the dangers of hydraulic fracturing.

Chris Mooney.

DIANOSTICS

86 **The Medical Sleuth.**

NIH investigator William A. Gahl unravels the cause of illnesses that have stumped other doctors

Interview by Brendan Borrell.

DEPARTMENTS

6 **From the Editor**

8 **Letters**

12 **Science Agenda.**

Fracking: no need to rush.

The Editors.

14 **Forum.**

A cybersecurity nightmare.

Scott Borg.

18 **Advances.**

Space junk. High-flying geese. Zombie caterpillars. Facebook for doctors. Halting hurricanes. Science smack down. Early placentas. Glasses-free 3-D. Moon sand.

32 **The Science of Health.**

Changing HDL and LDL levels does not always alter heart disease or stroke risk.

Francie Diep.

34 **TechnoFiles.**

Programmers continue to plug humorous gems into everyday software.

David Pogue.

92 **Recommended.**

Lost images from Scott's last Antarctic voyage. The logic of deceit and self-deception.

Kate Wong.

94 **Skeptic.**

The "science" behind Scientology

Michael Shermer.

96

Anti Gravity.

A tale of grapheme, elephants and pencil points.

Steve Mirsky.

98

50, 100 & 150 Years Ago.

104

Graphics Science.

Data game: computer vs brain.

Mark Fischetti.

On the Cover

For years the conventional wisdom on the peopling of the New World held that the so-called Clovis hunters were the first Americans, arriving some 13,000 years ago. Now new evidence shows conclusively that humans reached the Americas far earlier than previously thought, raising a host of questions about who these pioneers were and how they got here.
