

DISCOVER

CONTENIDO

VOLUME 31 No. 6, JULY/AUGUST 2010

Some of the tools that render the invisible visible: Xenon 100 dark matter detector, PCR amplification of DNA, wide-angle camera mounted on an F-18, quantitative analysis software, Philosophers' Stone, Allen Telescope Array, Tin Man chemical sensor, rapid genome sequencer. Below, their stories.

FEATURES

34 Invisible Planetoids.

Every part of the solar system is full of stuff —planets, comets, asteroids— except for one lonely zone between Mercury and the sun. Will new searches finally reveal something hiding there?

Phil Plait.

38 Mathematics of Terror.

Quantitative analysis can explain the movements of stock markets and the patterns of weather events. Recent studies suggest the techniques can even decode the mind of a terrorist.

Andrew Curry.

66 DISCOVER Interview:

Elena Aprile.

The Columbia University Physicist unveils her latest, greatest scheme for hunting WIMPs—the unseen particles that may dominate the universe.

Fred Guterl.

46 Gone But Not Forgotten.

When illegal immigrants cross into the United States, a distressing number of them vanish into the Sonoran Desert. Anthropologist Lori Baker is using DNA forensics to give them back their identities.

Jane Bosveld, Photographs by Matt Nager.

54 The Streetlight Effect.

Scientific inquiry is beset by errors, contradictions, and false conclusions. The author says he knows why.

David H. Freedman.

58 DISCOVER INTERVIEW: Richard A. Clarke.

America's former counterterrorism czar discusses the nation's vulnerability to cyber attack, laying out how to prepare for a future in which virtual wars could be fought by computer.

Robert Keating.

60 Earth on Fire.

All over the world, burning coal beds are belching toxic fumes, spewing greenhouse gases, and proving nearly impossible to extinguish.

Kristin Ohlson.

66 In the Footsteps of Giants.

Fossilized tracks provide an eloquent record of what dinosaurs were like when they were living, breathing, stomping animals. An extraordinary trove in Utah offers up its secrets.

Amy Barth.

72 DISCOVER INTERVIEW: Leroy Hood.

A key player in the Human Genome Project predicts a total transformation of medicine, fueled by our rapidly deepening understanding of how DNA works.

Pamela Wientraub.

74 Isaac Newton and the Philosophers Stone.

Alchemy gets a makeover: far from being the work of superstitious fools, it was an essential step toward modern science, endorsed by two of history's greatest geniuses.

Jane Bosveld.

84 Call Waiting.

For 50 years, scientists have scanned the cosmos for signs of intelligent alien life. After a half-century of failure, they are— amazingly— more optimistic than ever.

Michael Lemonick.

8 Editor's Note

10 Data.

Solar power gets a reboot; biology's master on-off switch; garbage collection on the high seas; light-powered rockets: your microbial fingerprint; slicing Saturn's rings; and more.

22 Hot Science

The best new books and movies, plus Cleopatra's palace and a dose of extra-dry British wit.

28 The Brain

A look at what happens inside the head during and after a brain injury.

Carl Zimmer.

32 **Vital Signs**

An older woman's sudden delirium the exposes a family secret.
Anna Reisman.

96 **20 Things You Didn't Know Nanotechnology.**

Electric hamsters, super computers, and eco-dust.
Rebecca Cofrey.
