

THE SCIENTIST

CONTENIDO

VOLUMEN 25 No. 10, OCTOBER 2011

FEATURES

- 38 **Introduction.**
Looking Back, Looking Forward.
In celebration of major conceptual advances in biology and the revolutions just over the horizon.
Walker F. Bodmer.
- 40 **Neuroscience.**
A Not-So. Short Circuit?
As neuroscientists look to the future of their field, they are beginning to delve into more complex factors that define our emotions and intentions.
Edyta Zielinska.
- Speaking of Memory.**
Considered a renegade by his peers, Nobel Prize-winner ERIC KANDEL used a simple model to probe the neural circuitry of memory.
- 44 **Omics.**
Data Deluge.
Large-scale data collection and analysis have fundamentally altered the process and mind-set of biological research.
Megan Scudellari.
- Thinking Outside the Genome.**
By extending its reach beyond science, the field of omics will change the way we live our lives.
Stephen Friend.
- 48 **Funding.**
A Quarter Century of Fuelling Science.
History repeats itself, and so do trends in research funding.
Bob Grant.
- Research and Debt Reduction.**
Investing more federal dollars in life science research may save the US economy.
Mary Woolley.
- 52 **Nanomedicine.**
A Small Revolution.
In fewer than 15 years, nanomedicine has gone from fantasy to reality.

Erica Westly.

Miniaturizing Medicine.

Nanotechnology will offer doctors new to diagnose and treat patients, booting efficiency and slashing costs.

Chad Markin.

56

Synthetic Biology.

Tinkering with Life.

A decade's worth of engineering-infused biology.

Jef Akst.

Evolving Engineering.

Exploiting the unique properties of living systems makes synthetic biologists better engineers.

George M. Church.

Synthesizing Life.

Designing genomes from scratch will be the next revolution in biology.

Craig Venter.

61

Biodiversity.

Conserving Our Shared Heritage.

Reversing catastrophic threats to our planet's biodiversity is not optional: our lives depend on it.

Thomas E. Lovejoy.

Exploring a Little-Known Planet.

Cataloging the staggering richness of Earth's species will have multiple payoffs.

Edward O. Wilson.

DEPARTMENTS

20

Editorial

...And Many Happy Returns.

To the great scientific leaps witnessed during our first 25 years, and the game changers yet to come.

Mary Beth Aberlin.

24

Notebook

Gorilla Warfare; Evolution, Tout de Suite; Double Blind; Marauding Moths.

37

From the Editor Emeritus.

Alive and Kicking.

The publication I launches a quarter century ago has come further than anyone ever expected.

Eugene Garfield.

66

The Literature.

Lake ecology; predicting trophic cascades; intracellular vesicle trafficking; light activation of leaf stem cells.

70

Lab Tools.

Charting the Course.

Three gene jockeys share their thoughts on past and future tools of the trade.

Jeffrey M. Perkel.

76

Bio Business.

New Tech Boosts Science.

From iPhone apps to cloud computing, everyday digital technologies are helping advance drug discovery, conduct clinical trials, and improve medical care.

Tia Ghose.

92

Reading Frames.

Going Viral.

The promise of viruses as biotech tools will help molecular biology fulfill its true potential.

William McEwan.

Beyond Nature vs. Nurture.

Researchers studying differences in how individuals respond to stress are finding that genes are malleable and environments can be deterministic.

Darlene Francis and Daniela Kaufer.

96

Foundations.

The Scientist, Inaugural edition, 1986.

Jef Akst.

IN EVERY ISSUE

13

Contributors.

22

Speaking of Science.

81

The Guide.

85

Recruitment.
