

# ***THE SCIENTIST***

## **CONTENIDO**

**VOLUMEN 27 No. 8, AUGUST 2013**

### **FEATURES**

- 28 **A Sense of Mystery.**  
Researchers from various disciplines are homing in on the mechanics of magnetoreception, an enigmatic sense that some animals use to navigate the globe.  
*Dan Cossins.*
- 36 **Engineering Life.**  
Cellular “tinkering” is critical for establishing a new engineering discipline that will lead to the next generation of technologies based on life’s building blocks.  
*Ahmad S. Khalil, Caleb J. Bashor, and Timothy K. Lu.*
- 42 **Best Places to Work in Academia, 2013.**  
Institutional funding and research support is critical to academics during this time of continued budgetary belt-tightening across government agencies.  
*The Scientists Staff.*

### **DEPARTMENTS**

- 11 **From the Editorial**  
**Finding the Way.**  
A focus on the movements of species and disciplines through space, time, and minds.  
*Mary Beth Aberlin.*
- 15 **Notebook**  
**The Mummy Code; N=Me; Bunker Bats; Smoke Detectors.**
- 22 **Critic at Large.**  
**Remaking Nature.**  
Synthetic biologists need to work together with conservationists to understand the environmental consequences of this new technology.  
*Kent H. Redford.*
- 24 **Thought Experiment.**  
**The Eye of the Finch.**  
Monitoring repeated, rapid evolution of an emerging avian pathogen.  
*Andrew Dobson.*

- 27      **Modus Operandi.**  
**Cellular Pegs-in-Holes.**  
Cell-containing hydrogel shapes fit into a template to create an artificial tissue environment.  
*Ruth Williams.*
- 46      **The Literature.**  
**Bacterial L-forms hint at primitive cell replication; myelin remodeling in adults; siRNA-spliceosome complexes.**
- 48      **Profile.**  
**Cancer Knows No Borders.**  
Olufunmilayo “Funmi” Olopade has demonstrated that genomics research can make a big impact on public health.  
*Megan Scudellari.*
- 51      **Scientist to Watch.**  
**Josh Snodgrass.**  
*Dan Cossins.*
- 52      **Lab Tools.**  
**Gene Silencing Is Golden.**  
A beginner’s how-to on RNAi screening in mammalian cells.  
*Carina Storrs.*
- 56      **Lab Tools.**  
**Molecular Multitasking.**  
Commercial kits use fluorescent beads to probe dozens of cytokines in one reaction.  
*Carina Atorrs.*
- 59      **Careers.**  
**Preserving Research.**  
The top online archives for storing your unpublished findings.  
*Amy Maxmen.*
- 63      **Reading Frames.**  
**Intelligent Life: The Search Continues.**  
Humans continue to scan the cosmos for a familiar brand of intelligence while ignoring a deeper form that pulses here at home.  
*Dorion Sagan.*
- 64      **Capsule Reviews.**  
*Bob Grant.*
- 72      **Foundations.**  
**Sketching out Cell Theory, circa 1837.**  
*Kate Yandell.*
