

# ***SCIENRIFRIC***

## **CONTENIDO**

**No. 70, NOVEMBER-DECEMBER 2010**

### **FEACTURES**

- 5 Aussie scientists have found 'shark – wash' stations where sharks can book in for a good cleaning.
- 10 One way to measure distances in the universe is by looking at the brightness of exploring stars, called supernovae.
- 12 Scientists use sticky tape to collect wombat hair. By analyzing the DNA from the hair, they can work out how many wombats there are.
- 16 In Japan, snow monkeys enjoy baths in the local hot springs.
- 18 The easiest way to tell a crocodile from an alligator is by its smile.
- 22 Lenticular (len – TICK – U – LAR) clouds are shaped like UFO's.

### **Hands-on activities**

- 22 **Cloud Spotting.**
- 26 **Tessellating Tiles!**
- 30 **Magnetic Pendulum.**

### **COVER IMAGE**

After reading this issue, you'll know how to name things like a scientist. Learn the scientific names for your cute and cuddly pets on pages 14-15 and then gaze up into the sky to identify clouds from pages 22-23.
