

SCIENTRIFVIC

CONTENIDO

No. 73, MAY-JUNE 2011

FEACTURES

- 5 There's a frog out there that is born with tiny black fangs and grows up to live its life gliding between tree tops.
- 7 An international team of scientists believes it has witnessed the birth of a planet for the first time ever.
- 12 Comets are dirty balls of ice that evaporate, releasing dust and gas. They grow tails that can stretch for hundreds of millions of kilometres.
- 16 Scientists from 20 countries around the world are going to build the world's largest radio telescope.
- 20 Some animals have senses that are totally different from our own. Sharks can sense electric fields that help them find food.

Hands-on activities

- 24 Direction Detection.
- 25 Which Finger is Which?
- 26 Shades of Colour.
- 27 Lunar Landscaping.
- 28 Telescope.

COVER IMAGE

Explore the wonders of space in this issue of *Scientriffic*. Read about telescopes [pages 16-17], then make your own [pages 28-29]. You'll find out more about comets [page 12] and craters on the Moon [page 27]. Don't forget to enter the competition to win a CSIRO Astronomy Kit [page 38].
