

SCIENTRIFIC

CONTENIDO

No. 81, SEPTEMBER-OCTOBER 2012

FEACTURES

- 4 A 50 – year-old experiment has shown how wild foxes can evolve to become tame.
- 8 X-rays are similar to the light waves we can see, only they have more energy.
- 10 Saturn’s rings are one kilometer thick, but tens of thousands of kilometres wide.
- 12 True albino animals have pale blue or pink eyes.
- 14 A million nanotubes lined up side-by-side would measure just a milimetre across.
- 18 Cave features such as stalactites and flowstones are made from limestone that is dissolved in water.

Hands-on activities

- 24 Taste the Electricity!
- 25 Thirsty Rocks.
- 26 Faking Random.
- 28 Try a Trilobite.

COVER IMAGE

It’s a myth that mice love nothing more than to nibble on cheese. If only they knew how many different varieties there are of this fabulous food, they might be more impressed. Turn to page 22 to get the word on curds.
