

AUSTRALASIAN SCIENCE

CONTENIDO

VOLUMEN 31 No. 6, JULY/AUGUST, 2010

FEATURES

- 14 **The Biggest Losers.**
New evidence tightens the noose on humans as the decisive factor in the extinction of the last of the megafauna in Australia and North America.
Richard “Bert” Roberts & Barry Brook.
- 18 **The True Believers.**
Are we pre-programmed to believe in weird and wonderful things that lack any significant scientific basis, and are some of us more likely to believe than others?
Krissy Wilson.
- 21 **It’s a Wiggly, Wiggly Universe.**
A map of the universe as it existed six billion years ago is a close to completion, and may provide new insights into the physics of dark energy.
Karl Glazebrook.
- 24 **A Matter of Taste.**
Newborn babies will smile when they first taste sucrose and wrinkle their noses at the bitter taste of quinine. What is the adaptive significance of such innate responses to taste?
John Prescott.
- 28 **Microbe Genes Could Curb Livestock Burps.**
The DNA sequence of a microbe that produces methane in ruminants provides a target for vaccines and other drugs to reduce greenhouse gas emissions from livestock.
Graham Jones & Zoran Ristovski.
- 32 **The Young Visionaries.**
Early-career scientists are using goggles that mimic common eye diseases to teach primary school children about their vision research and the importance of eye care.
Mandy Thoo.
- 35 **Evidence for Indigenous Australian Agriculture.**
The assumption that indigenous Australians did not develop agriculture is

highly contestable, with a body of evidence revealing that they developed food production systems and in some cases lived in large villages.

Rupert Gerritsen.

38 **Climate Change or Natural Variability?**

Meteorological records since the 1950s reveal a decrease in rainfall that is consistent with anthropogenic climate change, but a different picture emerges when looking at records since 1900.

Robert E. White.

conSCIENCE

40 **The Hazards of Synthesis.**

Synthesis of knowledge from different disciplines is underused in research and has hazards for practitioners.

Richard Eckersley.

REGULAR COLUMNS

3 **Simon Says**

The creation of the first, synthetic genome is the latest paragraph in the story of evolution.

4 **Browse**

A round-up of the latest science news from our shores.

41 **Cool Careers.**

Dr Yves Al-Ghazi is finding genes that can make better clothing, but plans to put his scientific training to a very different use.

42 **Out of this World.**

Dave Reneke brings news from the space and astronomy communities around the world.

43 **Australasian Sky.**

Your map of the night sky this month.

44 **The Naked Skeptic.**

Could there be a greater abuse of both science and Christianity than creationism?

45 **Publish or Perish.**

Your guide to new science books published this month.

46 **Eco Logic**

Policy-makers love biodiversity offsets while ecologists are wary of them.

What's important is their impact relative to the status quo.

47

Low Tech.

If you want cheaper medicines, get a prescription in New Zealand.

48

Quandary.

The creation of synthetic will increase the speed with which new organisms can be generated, and reduce the value of animal life to mere chemical devices.
