

AUSTRALASIAN SCIENCE

CONTENIDO

VOLUMEN 32 No. 3, APRIL, 2011

FEATURES

- 14 **A Nation of Creationists.**
A survey of beliefs in the origin of life and the universe has found that the majority of Australians believe in creationism and theistic evolution.
David Wilson.
- 17 **Comfort Foods and Exercise Reverse Anxiety from Early Life Stress.**
Stressful experiences during childhood can affect brain development, leading to increased anxiety and depression-like behaviours in adults, but this process can be reversed with diet and exercise.
Peter Barnes.
- 20 **New Insights into the Autistic Brain.**
Studies of the brain have identified a physiological basis for autism's impact on human perception, but new technology is making it possible to develop a biologically based diagnostic tool.
Gio Braidotti.
- 23 **Earthquakes with the Midas Touch.**
Earthquakes are catastrophic events, but the stress changes they generate deep in the Earth mean they have not so much a silver lining, but a golden one.
Steven Micklethwaite.
- 26 **Molecular Assassins.**
A molecular assassin that bacteria use to punch their way into our cells is also used by our immune system to return fire, opening up avenues for treating autoimmune diseases and cancer
Tim Thwaites.
- 28 **Getting to the Heart of Inflammation.**
Pre-term babies with bronchopulmonary disease are providing insights into inflammatory responses responsible for diseases as diverse as migraine, arthritis and diabetes.
Julia Veitch.
- 30 **How Tectonic Plates Take the Plunge.**

New evidence shows that the speed of the Earth's tectonic plates and their boundaries, as well as the formation and destruction of mountain ranges, is controlled by the size of plate boundaries.

Wouter Schellart.

34 **Cleaning Up the Toxins After the Fire.**

Toxic chemicals in firefighting foam accumulate in animal and human tissue, causing cancer and neonatal mortality. New technology is now keeping it from accumulating in the environment.

Deanne K. Bird, Katherine Haynes, Rob van den Honert and John McAneney.

conSCIENCE

4 **Now Effective Is Science Outreach?**

Will the International Year of Chemistry successfully promote science to the community?

Ian Rae.

REGULAR COLUMNS

3 **Simon Says**

Were the weather events of the past summer truly “extreme”?

5 **Browse**

A round-up of the latest science news from our shores.

36 **Cool Careers.**

The Big Day Out music festival this year hosted two performers who used Tesla coils to hurl lightning bolts at each other.

38 **Chemical Solutions.**

Toxic trace elements deposited by volcanic ash can persist in the environment for decades, with implications for water purity.

39 **Publish or Perish.**

Your guide to new science books publishes this month.

40 **Australasian Sky.**

Your map of the night sky this month.

41 **Out of this World.**

Dave Reneke brings news from the space and astronomy communities around the world.

42 **Directions.**

The rush to implement the new Australian Curriculum is jeopardising the future of science, engineering and maths education.

43

Expert Opinion.

Researches in to how 18 month-old babies responded to video of counting have led to claims that humans begin to learn to count earlier than previously thought.

44

The Naked Skeptic.

Practitioners of alternative medicine claim that conventional medicine treats only the symptoms and not the underlying cause – which ironically is what homeopathy's founder first advocated.

45

Eureka!

Magdeline Lum reports on quirky experiments and research findings.

46

Eco Logic.

Understanding the structure of Australia's forests and woodlands prior to European settlement has implications for how we manage our natural environments.

47

Lowe Tech.

A review of food labeling is introducing a traffic-light warning system but left it voluntary for purveyors of junk food.

48

Quandary.

Kits that charge thousands of dollars to genetically test consumers for genes with supposed links to social characteristics are heralding a new era of eugenics.
