

AUSTRALASIAN SCIENCE

CONTENIDO

VOLUMEN 32 No. 5, JUNE, 2011

FEATURES

- 16 **It's Evolution, But Not As We Know It.**
The accelerating pace of the cane toad's advance through tropical Australia has revealed a new mechanism of evolution.
Rick Shine.
- 20 **Cryptic Clues to Species Diversity.**
Genetic research is revealing how much we have seriously underestimated species diversity in many Australian vertebrate groups.
Paul Oliver.
- 23 **Drug Labs Leave Lethal Legacy.**
Mobile methamphetamine labs leave behind a deadly cocktail of contaminants in residential neighbourhoods – with property owners left to pay for the considerable clean-up costs.
Julian Cribb.
- 26 **Balancing Act.**
What can an earthquake simulator tell us about how our visual and vestibular systems communicate with each other to help us balance?
Mark Edwards and Michael R. Ibbotson.
- 29 **The Scientific Legacy of Burke & Wills.**
This month marks the 150th anniversary of the deaths of Burke and Wills. The expedition was originally considered a failure, but more recent analysis has changed that view.
Bernie Joyce and Doug McCann.
- 32 **Aluminium Production: A More Sustainable Future.**
Bacteria that consume sodium oxalate have the potential to reduce the environmental footprint of aluminium production while saving the industry millions.
Naomi McSweeney.
- 34 **Mining with Microbes.**
High salt concentrations in Western Australian groundwater have restricted the mining industry's use of microorganisms to extract metals from their

ores. Until now.
Carla Zammit.

conSCIENCE

- 4 **Invest in Science for a Stronger Australia.**
An economic crisis is looming because Australia is not investing in science for its future.
Suzanne Cory.

REGULAR COLUMNS

- 3 **Simon Says**
Being a quarry for the world is not enough but it buys us time to develop a high-tech economy.
- 5 **Browse**
A round-up of the latest science news from our shores.
- 37 **Cool Careers.**
US President Barack Obama has described Maria Skyllas-Kazacos' research as "one of the coolest things I've ever said out loud".
- 38 **Chemical Solutions.**
Earthworms ingest soil contaminants and absorb them through the skin, making them an ideal indicator of soil toxicity.
- 39 **Publish or Perish.**
Your guide to new science books publishes this month.
- 40 **Australasian Sky.**
Your map of the night sky this month.
- 41 **Out of this World.**
Dave Reneke brings news from the space and astronomy communities around the world.
- 42 **Directions.**
Civil wars over food in northern Africa at a time when around half of Australians are dying as a result of their diets present the greatest scientific challenge of our time.
- 43 **Expert Opinion.**
A study of children in Sydney suggests that retinal blood vessel narrowing increases with sedentary activity. Experts independent of the study respond to the research and what it means for children's health.

- 44 **The Naked Skeptic.**
One sure prediction about the end of the world is that there will be failed predictions about the end of the world.
- 45 **Eureka!**
A playlist of whale songs takes 2 years to reach French Polynesia.
- 46 **Eco Logic.**
The vexed issue of long-term biodiversity monitoring in Australia has had a long history of discussion but few outcomes, Here are a few obvious things we could do now.
- 47 **Low Tech.**
Uncertainty in science enables misconceptions to perpetuate in courts and the media, but there is now a process for dealing with conflicting advice from scientific experts.
- 48 **Quandary.**
Doctor's attitudes to the Hippocratic Oath reveal that codes of conducts are not enough to produce ethical doctors – and scientists.
