

# ***AUSTRALASIAN SCIENCE***

## **CONTENIDO**

**VOLUMEN 32 No. 8, OCTOBER, 2011**

### **FEATURES**

- 16 **How HIV in the Brain.**  
When the HIV virus gets into brain, it infects a key cell type that triggers dementia and at the same time provides HIV with a hideout where it is protected from the immune system and antiviral drugs.  
*Lachlan Gray.*
- 19 **Policing the Immune System.**  
The discovery of cells that regulate the body's immune response will help scientists to interpret the effectiveness of newly development drugs and have wide-ranging repercussions for the treatment of conditions including cancer and multiple sclerosis.  
*Erika Cretney and Stephen Nutt.*
- 22 **Aboriginal Skies.**  
How do indigenous cultures interpret the constellations above?  
*Paul Curnow.*
- 26 **Raising the Kids:  
Do You Need Good Genes or Good Friends?**  
Genetic and social influences on reproduction have never before been studied together in one wild species, but a new study of dolphins shows that not only do genetic and social effects both matter, but they interact synergistically.  
*Bill Sherwin.*
- 30 **Heat Cheats.**  
The diverse snails of the hot, dry Pilbara region survive by selecting the best microhabitats and through adaptations of shell form, reproduction and behaviour.  
*Michael Johnson.*
- 33 **Biological Patent Amendment:  
Good Intentions, Unnecessary Risk.**  
Dangerous uncharted waters lie ahead if our politicians cote to support the proposed amendment of Australia's Patents Act to ban patents on biological materials and genes.

*Julian Clark.*

- 36 **Meet Our New Chief Scientist.**  
Professor Ian Chubb says he expects to do his best work behind closed doors, but he has already made a significant mark on the public debate about science.  
*Stephen Luntz.*

## **conSCIENCE**

- 4 **The Progressive Education Fallacy.**  
The failure of curriculum reforms in Papua New Guinea prove that formal teaching practices are best for developing nations.  
*Gerard Guthrie.*

## **REGULAR COLUMNS**

- 3 **Simon Says**  
A key Labor reformer pads up again in the Department of Innovation.
- 5 **Browse**  
A round-up of the latest science news from our shores.
- 38 **Expert Opinion.**  
Last year the Hayabusa capsule landed in South Australia with a sample of dust collected from the Itokawa asteroid, Here the only Australian involved in the research outlines its significance.
- 39 **Cool Careers.**  
Michael Alpers' work in Papua New Guinea helped to explain one of the strangest known diseases, and opened the way to understanding several related infections.
- 40 **Publish or Perish.**  
Your guide to new science books publishes this month.
- 41 **Directions.**  
The debate about Australia's flagging productivity and competitiveness has overlooked one vital factor – and some local role models.
- 42 **Australian Sky.**  
Your map of the night sky this month.
- 43 **Out of this World.**  
Dave Reneke brings news from the space and astronomy communities around the world.

- 44 **The Naked Skeptic.**  
Texas is the most important market for textbooks in the USA, making it a pivotal place for creationists to influence what the rest of the nation is taught in science classes.
- 45 **Eureka!**  
Magdeline Lum reports on quirky experiments and research findings.
- 46 **Eco Logic.**  
Conservationists need to take some cues from evidence –based medicine to determine the most appropriate strategies.
- 47 **Low Tech.**  
The coal industry needs to take responsibility for the consequences of selling their product
- 48 **Quandary.**  
Can a quick trip overseas for stem cell therapy really cure your diabetes and hair loss?
